

Medonic M-series M32

Innovation built on total quality

FOR TODAY'S HEMATOLOGY LABS

Full CBC from one drop of blood

Maintenance-free shear valve

Unique walk-away Autoloader

Make way for Medonic!

Medonic 

**Packed with innovation. Uncompromising accuracy.
Outstanding quality. Medonic M-series M32 analyzers occupy
pride-of-place in the very best hematology labs.
There's room for one on your bench-top.**

M-series M32S with Autoloader is ideal for small to medium-sized hospitals needing walk-away analysis functionality.

Sampling to full CBC in about one minute

Three Medonic M-series M32 analyzers include MPA micro-pipette adapter sampling. Based on a simple finger prick sample taken directly from the patient, this unique feature transforms Medonic into what is probably the fastest blood cell counter in the world today.

Simply make a finger prick, draw blood into the special 20 µl micro-capillary tube, slide it into the adaptor and insert in the analyzer. In about one minute later, you see the full blood status on the touch-sensitive display. There's no preparation required, no pre-dilution, no vacuum tubes and no needles.

Since making a finger prick is largely painless, MPA is the ideal way to take and analyze blood samples from children. For blood banks, it's the perfect tool for making fast, pre-donation blood testing. It also saves the vein for donation.

Accurate results start with precise collection

In hematology analysis, no one can afford to compromise on quality components or accurate results. We certainly don't. Every Medonic M32 analyzer comes equipped with a high-precision shear-valve. No other sampling technique collects blood as precisely as a shear valve. It's a critical part of the measurement that you'll see reflected in the accuracy of every result you report.

Furthermore, not only is the Medonic shear valve extremely precise, it's also completely maintenance-free. As well as accurate results, you enjoy significantly reduced maintenance costs. The three-year warranty we give on this component further emphasizes the trust we put in its quality and reliability.

Perfect walk-away analyzer

Much as you'll enjoy working with your Medonic M32 analyzer, there will be times when you need to leave it to analyze a whole batch of samples by itself.

For these occasions, the M32S with Autoloader is the ideal instrument to have on your bench. As the top-of-the-range model in the M32-series, it's the perfect walk-away analyzer and ideal for many small to medium-sized hospitals. Just pre-load up to 2 x 20 samples and let it do the work!

Medonic M-series M32 analyzers deliver a full CBC from just 20 µl of blood. Perfect for children and blood banks!

Maintenance-free Medonic M-series M32 shear valve secures accurate results and lowers maintenance costs.

Pleasure-to-use graphic interface

The user interface is undoubtedly the most visible and best appreciated feature of the Medonic M32-series.

Simple-to-use and easy-on-the-eye, its large 7-inch touch-sensitive display features a 800 x 480 pixel

WVGA color screen with a landscape view.

Different set-up views, each optimized for different user situations, facilitate routine use. The most common include a sample view showing 'classical' graphs and all parameters. A second sample view features the much-used reference-bar display that makes clear indication if results are outside of their expected range.

Connect and communicate like never before

Better connectivity and improved communication protocols now let laboratories exchange both patient results and quality control data with interested parties. Medonic M-series M32 instruments are fully-equipped to meet new ways of communicating.

For example, they now feature a host of connection possibilities for printers, keyboards, barcode readers, USBs, etc. This better connectivity includes HL7 industrial standard protocol, now available together with the previous XML protocol. LIS connection is via a LAN port. Furthermore, this improved connectivity is very easy to use, as the front-panel USB port demonstrates.

Intuitive software speeds and simplifies

Powerful software keeps Medonic M-series M32 instruments in the front line of automated hematology analysis, simplifying work processes and giving users better control of sample results and patient records. ID field-length has been increased to 50 characters and patient memory extended to 50,000 records, for example. The menu system is both simple-to-understand and easy-to-navigate.

PLT extended count

Medonic M-series M32 provide a PLT extended count feature for more accurate PLT results in the critical low PLT range. In case of patient sample with severe thrombocytopenia detected the analyzer will activate PLT extended count, counting three times as many platelets as in normal count mode, to be able to give a more accurate PLT result. PLT results analyzed with extended count will be marked with an asterisk (*).

Part of our Total Quality Concept

Medonic M-series M32 hematology analyzers are part of a Total Quality Concept that comprises instruments, reagents, quality control materials and service – an unbroken chain of know-how in quality hematology measurements.

Modern user-interface. Its clean, uncluttered design promotes efficient operation and accurate assessment of results.

Medonic M-series M32 analyzer users enjoy improved data communication thanks to a broad selection of connectivity options.

Improved software simplifies work processes and gives users better control of sample results and patient records.

Four models available

One is just right for you

The large touchscreen display provides a clear view of sample results, including various data points and graphs. The interface is intuitive and easy to navigate, allowing for quick analysis and interpretation of results.

The sample slot is designed for easy access and safe handling of samples. The yellow biohazard warning symbol and the '1:1' ratio indicator ensure that users are aware of the sample type and the required dilution.

The Medonic logo and the cool blue design are a testament to the machine's reliability and precision. The design is sleek and modern, fitting seamlessly into any laboratory setting.

The machine is equipped with a variety of features, including a large touchscreen display, a sample slot, and a biohazard warning symbol. These features ensure that the machine is both functional and safe to use.

Medonic M32B – even the basic

Medonic M32M – five-sample mixer is ideal for doctors' offices and small labs.

Medonic M32C – closed-tube mixer is ideal for doctors' offices and small labs.

Medonic M32D – closed-tube mixer is ideal for doctors' offices and small labs.
