

- **Compact and Easy-to-Use:** Designed for convenience in various settings.
- **Fluorescence-Based System:** Utilizes fluorescence technology to measure the concentration of analytes.
- **Wide Range of Biomarkers:** Capable of detecting numerous biomarkers for conditions including cardiac, cancer, hormones, infectious diseases, autoimmune diseases, and metabolic diseases.
- **Improved User Interface:** Features an enhanced display and advanced optical system compared to its predecessor.
- **Sample Types:** Can analyze analytes in various samples such as blood and urine
