- **Function:**

    It is designed for performing various biochemical tests in laboratory settings, offering enhanced efficiency, accuracy, and quick turnaround times.

- **Features:**

- Compact and fully-featured system with enhanced performance.

- Offers a broad test menu and a best-in-class operator interface.

- Provides productivity and error-reducing capabilities, along with automated reagent management.

- **Applications:**

    Ideal for smaller or satellite laboratory locations, serving primary, STAT, or backup testing needs with random access and typical throughput up to 140 tests per hour.

- **Operational Benefits:**

    Designed for minimal maintenance and effective use of consumables to reduce operational cost
